Company Description

Botaneco is the global developer and marketer of innovative Oleosome-based ingredients to the personal care and OTC topical markets. Oleosomes are oil storage reservoirs that help to preserve and protect seed oil from rancidity and oxidation. They are common to virtually every oilseed crop and botanical including safflower, sunflower, canola, flax and cucumber. Botaneco has developed a proprietary manufacturing process, which allows for the isolation of intact Oleosomes from seeds using a gentle aqueous extraction method. Hydresia™ ingredients (Safflower Oleosomes) are mild, non-irritating emulsifiers that provide maximum moisture retention and skin barrier integrity in a wide variety of product categories, including cleansers, lotions, creams, baby care and sensitive skin products.

Key Personnel

Andrew Baum
