### Company Description

As a world leader in specialty chemicals, International Specialty Products (ISP) is a leading supplier in the personal care and household, industrial and institutional (HI&I) markets, dedicated to delivering innovative technology, performance-enhancing products, and exceptional service to our customers.

In hair care, ISP is the foremost supplier of novel styling polymers. Not only do these specially developed polymers deliver hold allowing consumers to achieve their desired hairstyle, but they also deliver additional benefits such as volume, shine, and thermal protection. For skin care and sun care, ISP's ingredients include bio-functional actives, UV filters, waterproofing agents, preservatives, moisturizers, and microencapsulation that allow formulators to

develop novel formats with multi-functional benefits. In oral care, our polymers are used in toothpaste, mouthwash, tooth whitening, and denture applications for improved oral health and wellness benefits. For the HI&I industry, ISP provides high-performance chelating agents, emulsifiers, dispersants, disintegrants, opacifiers, rheology modifiers, DTI and ASR agents, soil release agents, wetting agents, biocides and specialty surfactants.

### Technologies, Patents, New Products

- AquaStyle™ 300 – a next-generation styling gel polymer
- ColorTrue Technology™ with Styleze® W
- Laminixyl IS™ - anti-aging peptide
- Global preservation using Optiphen® systems
- UltraThix™ P-100 thickener and suspending agent

### Major Markets

Personal Care (hair, skin, sun, oral) and  
HI&I (cleaners, detergents, dishwashing)

### Major Products

- Advantage® film formers and hair fixatives
- Antaron®/Ganex® waterproofing agents
- ISP Captivates™ microencapsulation systems
- Chromabond® dye transfer inhibitors
- Peroxydone™ hydrogen peroxide polymer complexes
- Vincience™ bio-functional actives

### Specialized Services

For its ISP Captivates™ range of microcapsules and microbeads, ISP can produce tailor-made solutions to meet customers' requirements. In addition, ISP can develop custom-blend preservative systems.
